unheard

So/2 said that something these people have reported to him so far, i.e. a large body of people of U.S. background is uneasy & "more" unheard or dissatisfied by what is going on which may be prone to larger unrest & tumult. People now are not only worried, perplexed, but also slightly annoyed or angry, partly because they're ~~not~~ confused as to how to deal with the problem. They're not accustomed to things happening outside an orderly plan. ~~This was~~ Then incident of unrest in a growing problem that began some time previously with <sup>very</sup> minor disturbances, ~~which were~~ regarded as a passing phase of the target population but have been steadily growing more acute & now the "powers that be" have become seriously concerned.

 motivation

Still insufficient funding. Serious shortage of finance. Conference on - "the system that provides funds is wound up" and control + accountability is muddled. These people are feeling a bit under siege at present because several major issues are not working to their expectations + some chronic crises are not fully resolved. Pressure is being put on them to fix things + they don't see a clear way of doing it.

Present concerns are with domestic problems which have occupied them for some time - probably a few weeks. They anticipate being thus occupied for sometime more - perhaps a couple of weeks - but fully expect to resolve current issues + move on to other, future projects or agenda.
